- Powerful yet low-noise brushless motor
- Specially customized for the MOZA Air 2
- The "4th axis" of zoom & focus control
- Intelligent operation with the optional handunit
- Compatible with different gimbals

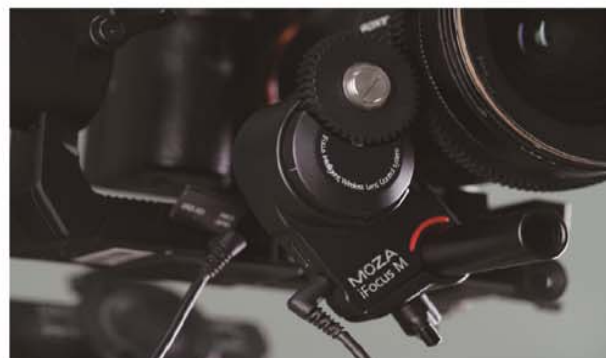

MOZA iFocus-M

Ultra-compact Wireless Lens Control System

SUPER COMPACT. ULTRA-LIGHTWEIGHT

Compactly designed, the iFocus-m is small in size, big in stature. With a body of only 88g, the gimbal balance is not affected by this minimal weight increase.

POWERFUL YET QUIET

The Micro brushless motor has superior torque with low noise providing confident and reliable control. The iFocus-M gives you both power and accuracy. Precision fitted bearings and gears keep quiet even at high speed, ensuring your recording is completely unaffected.

EASY TO USE

The iFocus-M is specially customized for the MOZA Air 2 eliminating the need for extra adapters and troublesome calibration. After connecting to the Air 2, the gimbal powers the iFocus-M removing addition battery requirements and restrictions.

THE 4TH AXIS OF FOCUS & ZOOM CONTROL

When used with the MOZA Air 2, the iFocus-M becomes the fourth axis and an additional shooting tool for the gimbal, therefore users can control focus, zoom and iris of most DSLRs and mirrorless cameras via the gimbal handgrip.
