PAGEOS 5

SmallHD's beloved PageOS operating system just got a massive upgrade. Available as a free software upgrade, PageOS 5 features the powerful new functionality of Multi-View & seamless integration with Calman calibration software on 4K production monitors. Additionally, PageOS 5 introduces highly-anticipated tools like Lookaround Camera Control on all pages, EL Zone false color, Tetrahedral LUT interpolation, improved HD upscaling, and more.

New Tools

MULTI-VIEW

Unlock the ability to view up to 4 camera feeds simultaneously on your Cine or OLED Series 4K monitor. Combine side-by-side, quad, or 1+3 video layouts with endlessly-customizable tools to build a configuration for every scenario.

TETRAHEDRAL LUT INTERPOLATION

Tetrahedral is the preferred LUT format when shooting in HDR and with PageOS 5 your monitor now supports this popular option.

EL ZONE

Finally, a false-color system based on stops of exposure. This tool was developed in collaboration with EL Zone's inventor, legendary cinematographer Ed Lachman, ASC. EL Zone shows specific colors for each stop above and below 18% grey, allowing cinematographers to quickly assess lighting in a scene without having to translate IRE to exposure and light density.

IMPROVED SHARPNESS ON 4K MONITORS

Drastically improved sharpness of 1080p signals on our 4K monitors, allowing users to pull focus as accurately as possible in HD or 4K.

NEW TOOLS FOR PAGEOS 5

LOOKAROUND CAMERA CONTROL

- View and manipulate crucial camera- control functions on all pages of Smart 7 monitors, along with simultaneous access to all PageOS 5 tools.
- Key photographic and camera settings are ever-present above and below the 16:9 video feed once you pair your monitor & camera, allowing quick configuration combined with critical tools like focus peaking and false color.

CALMAN INTEGRATION

- Calibrate 4K Production monitors with confidence using the built-in Calman calibration tool.
- Connect a computer with a calibration probe running Portrait Displays Calman to a 4K production monitor via ethernet and the software will auto-calibrate and upload a calibration LUT directly into the monitor.
- Increase your color confidence with Calman and SmallHD.
